11th January 2018

**Developments in Remote Magnetic Monitoring of Stress in
Ferromagnetic Pipelines**

By

Hamed Habibi - Speir Hunter Limited

Technical Director

The presentation will introduce and explain the benefits of Stress Monitoring in Pipeline Integrity management. The technique is the only inspection technique that can simultaneously map the lateral position and depth of cover of the pipeline whilst also providing comprehensive defect detection. Moreover, it provides additional deliverables that anticipate the increasing demand of pipeline regulatory authorities such as the location of casings and wrinkle bends.

Venue: Imperial College, Skempton Building, London SW7 2BB

18.00 Doors Open - Networking

18:30 Presentation by Hamed Habibi
